

Permit

Environmental Protection Act 1994

Environmental authority EPPG00616913

This environmental authority is issued by the administering authority under Chapter 5 of the Environmental Protection Act 1994.

Environmental authority number: EPPG00616913

Environmental authority takes effect on 31 January 2018.

The anniversary date of this environmental authority is 03 December. The payment of the annual fee will be due each year on this day.

An annual return will be due each year on 01 April.

Environmental authority holder(s)

Name(s)	Registered address
ADZ ENERGY (QUEENSLAND) PTY LTD	Level 27, 1 Eagle Street BRISBANE QLD 4000
OGT ENERGY PTY LTD	Level 27, 10 Eagle Street BRISBANE QLD 4000

Environmentally relevant activity and location details

Environmentally relevant activity/activities	Location(s)
Non-Scheduled - Petroleum Activity - Petroleum Pipeline Licence (PPL)	PPL22

Additional information for applicants

Environmentally relevant activities

The description of any environmentally relevant activity (ERA) for which an environmental authority (EA) is issued is a restatement of the ERA as defined by legislation at the time the EA is issued. Where there is any inconsistency between that description of an ERA and the conditions stated by an EA as to the scale, intensity or manner of carrying out an ERA, the conditions prevail to the extent of the inconsistency.

An EA authorises the carrying out of an ERA and does not authorise any environmental harm unless a condition stated by the EA specifically authorises environmental harm.

A person carrying out an ERA must also be a registered suitable operator under the *Environmental Protection Act 1994* (EP Act).

Mobile and temporary activities

If you operate a mobile and temporary environmentally relevant activity (ERA), other than regulated waste transport, you are required to maintain a work diary. You must:

- use the approved form for a work diary (ESR/2015/1696);
- keep the work diary records for 2 years after the last entry;
- inform the administering authority within 7 days of the work diary being lost or stolen;
- record the information required in the work diary for each location within 1 day of leaving the location.

Contaminated land

It is a requirement of the EP Act that an owner or occupier of contaminated land give written notice to the administering authority if they become aware of the following:

- the happening of an event involving a hazardous contaminant on the contaminated land (notice must be given within 24 hours); or
- a change in the condition of the contaminated land (notice must be given within 24 hours); or
- a notifiable activity (as defined in Schedule 3) having been carried out, or is being carried out, on the contaminated land (notice must be given within 20 business days)

that is causing, or is reasonably likely to cause, serious or material environmental harm.

For further information, including the form for giving written notice, refer to the Queensland Government website www.qld.gov.au, using the search term 'duty to notify'.

Take effect

Please note that, in accordance with section 200 of the EP Act, an EA has effect:

- a) if the authority is for a prescribed ERA and it states that it takes effect on the day nominated by the holder of the authority in a written notice given to the administering authority - on the nominated day; or
- b) if the authority states a day or an event for it to take effect-on the stated day or when the stated event happens; or
- c) otherwise - on the day the authority is issued.

However, if the EA is authorising an activity that requires an additional authorisation (a relevant tenure for a resource activity, a development permit under the *Planning Act 2016* or an SDA Approval under the *State Development and Public Works Organisation Act 1971*), this EA will not take effect until the additional authorisation has taken effect.

If this EA takes effect when the additional authorisation takes effect, you must provide the administering authority written notice within 5 business days of receiving notification of the related additional authorisation taking effect.

The anniversary day of this environmental authority is 03 December. The payment of the annual fee will be due each year on this day. An annual return will be due each year on 01 April.

If you have incorrectly claimed that an additional authorisation is not required, carrying out the ERA without the additional authorisation is not legal and could result in your prosecution for providing false or misleading information or operating without a valid environmental authority.

**Department of the Environment, Tourism, Science
and Innovation**

This environmental authority has been automatically
issued by an electronic system that is approved by
the chief executive under section 555 of the
Environmental Protection Act 1994

Enquiries:

Energy and Extractive Resources
Department of the Environment, Tourism, Science,
and Innovation

Phone: 07 3330 5715

Email: EnergyandExtractive@detsi.qld.gov.au

Obligations under the *Environmental Protection Act 1994*

In addition to the requirements found in the conditions of this environmental authority, the holder must also meet their obligations under the EP Act, and the regulations made under the EP Act. For example, the holder must comply with the following provisions of the Act:

- general environmental duty (section 319)
- duty to notify environmental harm (section 320-320G)
- offence of causing serious or material environmental harm (sections 437-439)
- offence of causing environmental nuisance (section 440)
- offence of depositing prescribed water contaminants in waters and related matters (section 440ZG)
- offence to place contaminant where environmental harm or nuisance may be caused (section 443)

Other permits required

This permit only provides an approval under the *Environmental Protection Act 1994*. In order to lawfully operate you may also require permits / approvals from your local government authority, other business units within the department and other State Government agencies prior to commencing any activity at the site. For example, this may include permits / approvals with your local Council (for planning approval), the Department of Transport and Main Roads (to access State controlled roads), the Department of Natural Resources and Mines, Manufacturing and Regional and Rural Development (to clear vegetation), and the Department of Primary Industries (to clear marine plants or to obtain a quarry material allocation).

Obligations under the *Mining and Quarrying Safety and Health Act 1999*

If you are operating a quarry, other than a sand and gravel quarry where there is no crushing capability, you will be required to comply with the *Mining and Quarrying Safety and Health Act 1999*. For more information on your obligations under this legislation contact Mine Safety and Health at www.nrmrdd.qld.gov.au, or phone 13 QGOV (13 74 68) or your local Mines Inspectorate Office.

Development Approval

This permit is not a development approval under the *Planning Act 2016*. The conditions of this environmental authority are separate, and in addition to, any conditions that may be on the development approval. If a copy of this environmental authority is attached to a development approval, it is for information only, and may not be current. Please contact the Department of the Environment, Tourism, Science and Innovation to ensure that you have the most current version of the environmental authority relating to this site.

Legislative Requirements and Conditions of Environmental Authority

Schedule A - General

PREVENT AND/OR MINIMISE LIKELIHOOD OF ENVIRONMENTAL HARM

- A1 This authority does not authorise environmental harm unless a condition contained within this authority explicitly authorises that harm. Where there is no condition or the authority is silent on a matter, the lack of a condition or silence shall not be construed as authorising harm.
- A2 In carrying out petroleum activities the holder of this authority must prevent and / or minimise the likelihood of environmental harm being caused.

MAINTENANCE OF MEASURES, PLANT AND EQUIPMENT

- A3 The holder of this authority must:
- a) install all measures, plant and equipment necessary to ensure compliance with the conditions of this authority; and
 - b) maintain such measures, plant and equipment in a proper and efficient condition; and
 - c) operate such measures, plant and equipment in a proper and efficient manner.
- A4 All instruments, equipment and measuring devices used for measuring or monitoring in accordance with any condition of this authority must be calibrated, appropriately operated and maintained.
- A5 No change, replacement or alteration of any plant or equipment is permitted if the change, replacement or alteration increases the environmental harm caused by the petroleum activities.
- A6 The holder of this authority must ensure that daily operation and maintenance of all plant and equipment relating to the authorised petroleum activities are carried out by suitably qualified, competent and experienced person(s).

- A7 All analyses and tests required to be conducted under this authority must be carried out by a laboratory that has NATA certification for such analyses and tests, except as otherwise authorised by the administering authority.

SPILL RESPONSE

- A8 A spill response plan must be developed for all pipelines and other plant or equipment under this authority carrying liquids that have the potential to cause environmental harm. The plan must address the following:
- a) monitoring and detection systems;
 - b) notification and reporting procedures (internal and external);
 - c) call-out procedures and contact lists;
 - d) measures required to halt the spill (i.e. control of pumps, valves etc);
 - e) spill containment procedures;
 - f) procedures to safely recover the spilt material;
 - g) clean up and rehabilitation procedures;
 - h) requirements for the remediation or disposal of contaminated soil;
 - i) personnel responsibilities;
 - j) equipment requirements, location, storage, maintenance and transport;
 - k) communications and logistics; and
 - l) incident investigation procedures.

FINANCIAL ASSURANCE

- A9 The holder of this authority must provide a financial assurance in the amount and form required by the administering authority for the operation and decommissioning of the pipeline and any associated infrastructure. The calculation of financial assurance must be in accordance with the Department of Environment and Resource Management guideline "Financial assurance for petroleum activities".
- A10 Subject to Condition (A9), the holder of this authority must revise the estimate of financial assurance every five (5) years on the anniversary date of this authority.

- A11 In accordance with Condition (A10), the revised calculation of financial assurance must be provided to the administering authority on the anniversary date of this authority.
- A12 The financial assurance is to remain in force until the administering authority is satisfied that no claim is likely to be made on the assurance.

DEFINITIONS

- A13 Words and phrases used in this authority are defined in Appendix 1 - Definitions. Where a definition for a term used in this authority is sought and the term is not defined within this authority, the definitions in the Environmental Protection Act 1994, its Regulation and Environmental Protection Policies must be used.

Schedule B – Air Emissions

DUST MANAGEMENT

- B1 The release of any dust and particulate matter resulting from the petroleum activities must not cause an environmental nuisance at any sensitive or commercial place.
- B2 Notwithstanding Condition (B1), dust and particulate matter must not exceed the following levels when measured at any sensitive or commercial place:
- a) Dust deposition of 120 milligrams per square metre per day, averaged over one (1) month, when monitored in accordance with AS 3580.10.1 Methods for sampling and analysis of ambient air- Determination of particulates - Deposited matter- Gravimetric method of 1991; or
 - b) a concentration of particulate matter with an aerodynamic diameter of less than 10 micrometre (µm) (PM10) suspended in the atmosphere of 50 micrograms per cubic metre over a 24 hour averaging time, at a nuisance sensitive or commercial place downwind of the site, when monitored in accordance with AS3580.9.6 'Ambient air— Particulate matter — Determination of suspended particulate PM10 high-volume sampler with size-selective inlet Gravimetric methods; or
 - c) a concentration of particulate matter with an aerodynamic diameter of less than 2.5 micrometre (µm) (PM2.5) suspended in the atmosphere of 25 micrograms per cubic metre over a 24 hour averaging time, at a nuisance sensitive or commercial place downwind of the site, when monitored in accordance with AS/NZS3580.9.10.2006.

- B3 When requested by the administering authority, dust and particulate monitoring must be undertaken within a reasonable and practicable timeframe nominated by the administering authority to investigate any complaint (which is neither frivolous nor vexatious nor based on mistaken belief in the opinion of the authorised officer) of environmental nuisance at any sensitive or commercial place, and the results must be notified within 14 days to the administering authority following completion of monitoring.
- B4 If monitoring, in accordance with (B3) indicates exceedence of the relevant limits in Condition (B2), then the holder of this authority must:
- a) address the complaint including the use of appropriate dispute resolution if required; and/or
 - b) as soon as practicable implement dust abatement measures so that emissions of dust from the activity do not result in further environmental nuisance.

ODOUR MANAGEMENT

- B5 The release of noxious or offensive odour(s) or any other noxious or offensive airborne contaminant(s) resulting from the petroleum activity must not cause an environmental nuisance at any sensitive or commercial place.
- B6 When requested by the administering authority, odour monitoring must be undertaken within a reasonable and practicable timeframe nominated by the administering authority to investigate any complaint (which is neither frivolous nor vexatious nor based on mistaken belief in the opinion of the authorised officer) of environmental nuisance at any sensitive place, and the results must be notified within 14 days to the administering authority following completion of monitoring.
- B7 If monitoring in accordance with Condition (B6), indicates Condition (B5) is not being met, then the holder of this authority must:
- a) address the complaint including the use of appropriate dispute resolution if required; and/or
 - b) as soon as practicable implement odour abatement measures so that emissions of odour from the activity do not result in further environmental nuisance.

Schedule C – Water Managment

RELEASE TO WATERS

- C1 The holder of this authority must ensure that the petroleum activities do not result in the release of contaminants to waters, unless specifically authorised under this authority.

RELEASE TO LAND

- C2 Notwithstanding Conditions (C3) and (C4), contaminants must not be released to land.
- C3 The holder of this authority may allow pipeline trench water to be released to land for disposal provided that the water does not have any properties nor contain any organisms or other contaminants in concentrations that are capable of causing environmental harm.
- C4 Subject to Condition (C3), the holder of this authority must ensure that the release of trench water to land must be carried out in a manner that ensures that:
- a) vegetation is not damaged;
 - b) soil erosion and soil structure damage is avoided;
 - c) there is no surface ponding of trench water;
 - d) the quality of groundwater is not adversely affected; and
 - e) there are no releases of trench water to any surface waters.

MANAGEMENT OF HYDRO-TEST WATER

- C5 Hydrostatic test water must be contained in existing dams on site, tested and either:
- a) directly reused where appropriate for petroleum activities;
 - b) treated so that it meets water quality criteria for the intended reuse; or
 - c) disposed of via evaporation in a suitably lined pond.

STORMWATER MANAGEMENT

- C6 Except as otherwise provided by the conditions of this authority, petroleum activities must be carried out by such reasonable and practicable means necessary to prevent the contact of incident rainfall and stormwater runoff with waste or other contaminants.

- C7 All stormwater treatment devices used to treat stormwater from the authorised activities must be maintained in proper and efficient working condition.
- C8 The maintenance and cleaning of vehicles and other equipment or plant must be carried out in areas where the resultant contaminants are not to be released to any waters.

DETERMINING WATER QUALITY CONTAMINANTS

- C9 All determinations of the quality of contaminants released must be made in accordance with methods prescribed in the latest edition of the Department of Environment and Resource Management Water Quality Sampling Manual, and carried out on samples that are representative.

PROTECTION OF WATERCOURSES, WETLANDS AND SPRINGS

- C10 Unless otherwise approved under relevant legislation, the holder of this environmental authority must not:
- a) excavate or place fill in a way that interferes with the flow of water in a watercourse, wetland, or spring, including: works that divert the course of flow of the water or works that impound the water;
 - b) undertake activities that take water from a watercourse, wetland or spring; or
 - c) undertake activities that take overland flow water using works that are mentioned as assessable development in a water resource plan under the Water Act 2000.

ACTIVITIES IN A WATERCOURSE, WETLAND OR SPRING

- C11 Significant disturbance to the bed or banks of a watercourse or wetland, or to a spring must:
- a) only be caused where necessary for the construction, operation and/or maintenance of roads, tracks and pipelines that are essential for carrying out other authorised petroleum activities and no reasonable alternative location is feasible; and
 - b) be no larger than the minimum area necessary for the purpose; and
 - c) be designed by an appropriately qualified person; and
 - d) be undertaken and maintained by a person with appropriate skills who has been informed of the design and is appropriately supervised; and
 - e) have rehabilitation commencing as soon as reasonably practicable upon cessation of the relevant authorised petroleum activities.

Schedule D – Noise Management

- D1 The holder of this authority must ensure that petroleum activities do not cause environmental nuisance at any sensitive or commercial place.
- D2 Prior to undertaking petroleum activities that are likely to impact a noise sensitive or commercial place, the holder of this authority must investigate potential noise emissions from the proposed petroleum activities and determine if noise emissions are likely to exceed the limits set in Schedule D - Table 1. If noise emissions are likely to exceed these limits, then the holder must take appropriate measures to either relocate the petroleum activity or incorporate noise abatement and / attenuation measures to mitigate those impacts. These measures must be in place prior to undertaking the proposed petroleum activity.
- D3 Notwithstanding condition (D1), the holder of this authority must ensure that noise emitted from any aspect of petroleum activities does not exceed the noise levels specified in Schedule D Table 1 - Noise Limits, at any sensitive place or commercial place.

Schedule D Table 1 - Noise Limits

Sensitive place						
Noise level dB(A) measured as:	Monday to Saturday			Sundays and public holidays		
	7am to 6pm	6pm to 10pm	10pm to 7am	9am to 6pm	6pm to 10pm	10pm to 9am
LA90, adj, 15 mins	lesser of bg+3	lesser of bg+0	lesser of bg+0	lesser of bg+0	lesser of bg+0	lesser of bg+0
LA10, adj, 15 mins	lesser of bg+5 or 50	lesser of bg+5 or 45	lesser of bg+0 or 40	lesser of bg+5 or 45	lesser of bg+5 or 40	lesser of bg+0 or 35
LA1, adj, 15 mins	lesser of bg+10 or 55	lesser of bg+10 or 50	lesser of bg+5 or 45	lesser of bg+10 or 50	lesser of bg+10 or 45	lesser of bg+5 or 40
Commercial place						
Noise level dB(A) measured as:	Monday to Saturday			Sundays and public holidays		
	7am to 6pm	6pm to 10pm	10pm to 7am	9am to 6pm	6pm to 10pm	10pm to 9am
LA90, adj, 15 mins	lesser of bg+5 or 50	lesser of bg+0 or 45	lesser of bg+0 or 40	lesser of bg+3 or 43	lesser of bg+0 or 40	lesser of bg+0 or 40
LA10, adj, 15 mins	lesser of bg+10 or 55	lesser of bg+10 or 50	lesser of bg+5 or 45	lesser of bg+10 or 50	lesser of bg+10 or 45	lesser of bg+5 or 40
L01, adj, 15 mins	lesser of bg+15 or 60	lesser of bg+15 or 55	lesser of bg+10 or 50	lesser of bg+15 or 55	lesser of bg+15 or 50	lesser of bg+10 or 45

bg = background noise level

In the event that measured bg is less than 25 dB(A), then 25 dB(A) can be substituted for the measured level

- D4 The method of measurement and reporting of noise levels must be in accordance with the most recent edition of the Department of Environment and Resource Management's Noise Measurement Manual or the most recent version of AS1055 Acoustics – Description and measurement of environmental noise.
- D5 When requested by the administering authority, noise monitoring must be undertaken within a reasonable and practicable timeframe nominated by the administering authority to investigate any complaint (which is neither frivolous nor vexatious nor based on mistaken belief in the opinion of the authorised officer) of environmental nuisance at any sensitive or commercial place, and the results must be notified within 14 days to the administering authority following completion of monitoring.
- D6 If monitoring in accordance with Condition (D5), indicates Condition (D3) is not being met, then the holder of this authority must:
- a) address the complaint including the use of appropriate dispute resolution if required; and/or
 - b) as soon as practicable implement noise abatement measures so that noise emissions from the activity do not result in further environmental nuisance.
- D7 Upon agreement with any affected person(s), and where alternative arrangements are in place that prevent environmental nuisance of noise emissions within a sensitive place, the noise levels provided in Schedule D Table 1 - Noise Limits, do not apply for that period in which the alternative arrangement is in place. These arrangements will be made with all related costs incurred to be borne by the holder of this authority.

Schedule E – Waste Management

- E1 Where practicable, general waste generated in carrying out the petroleum activities must be reused, recycled or removed to a facility that can lawfully accept the waste under the Environmental Protection Act 1994.

- E2 Waste, including vegetation, must not be burnt on site.
- E3 Any spillage of hazardous waste or other contaminants that may cause environmental harm, must be effectively contained and/or cleaned up as quickly as practicable. Such spillage must not be cleaned up by hosing, or otherwise thereby releasing such waste or contaminants to any land or waters.
- E4 All regulated waste removed from the site must be removed by a person who holds a current authority to transport such waste under the provisions of the Environmental Protection Act 1994 and sent to a facility licensed to accept such waste.
- E5 When regulated waste is removed from within the boundary of the operational land and transported by the holder of this authority, a record must be kept of the following:
- a) date of waste transport;
 - b) quantity of waste removed and transported;
 - c) type of waste removed and transported;
 - d) route selected for transport of waste;
 - e) quantity of waste delivered; and
 - f) any incidents (e.g. spillage) that may have occurred on route.
- E6 If a person removes regulated waste associated with activities within the operational land and disposes of such waste in a manner which is not authorised or is improper or unlawful then, as soon as practicable, notify the administering authority of all relevant facts, matters and circumstances known concerning the disposal.

Schedule F – Land Management

MINIMISING DISTURBANCE TO LAND AND SOIL

- F1 The holder of this authority must:
- a) minimise disturbance to land in order to prevent land degradation; and

- b) ensure that for land that is to be significantly disturbed by petroleum activities (except in area of highly erosive soils), the top layer of the soil profile is removed; and
- i. stockpiled in a manner that will preserve its biological and chemical properties; and
- ii. used for rehabilitation purposes in accordance with condition (F18).

ACID SULPHATE SOILS

- F2 The holder of this authority must determine the presence of acid sulphate soils prior to any excavation or filling in areas below 5 metres Australian Height Datum (AHD) where the natural ground level is less than 20 metres AHD.
- F3 Where the presence of acid sulphate soils has been determined, the holder of this environmental authority must comply with an acid sulphate soil environmental management plan prepared in accordance with the State Planning Policy 2/02 Guideline Acid Sulphate Soils when carrying out petroleum activities on all land, soil and sediment if
- a) excavating or otherwise removing 100m³ or more of soil or sediment; or
 - b) filling of land involving 500m³ or more of material with an average depth of 0.5 of a metre or greater.
- F4 The acid sulphate soil environmental management plan must be prepared and implemented by a suitably qualified and experienced person.
- F5 Any filling and excavation subject to condition (F3) and condition (F4) is prohibited unless the holder of this environmental authority has submitted to the administering authority a copy of the acid sulphate soil environmental management plan which has been assessed and accepted by the administering authority.

VEGETATION MANAGEMENT

- F6 The holder of this authority must
- a) prevent or minimise disturbance to vegetation by petroleum activities; and
 - b) manage the effects of clearing to prevent the loss of biodiversity, reduction of ecological processes and land degradation.

F7 The holder of this authority must consider whether it is feasible to avoid clearing, and where viable alternatives exist, must not clear vegetation:

- a) in, or within 50 metres of, the high bank of a watercourse;
- b) in, or within 50 metres of, the static high water mark of wetlands, lakes or springs;
- c) in a way that isolates clumps or dissects corridors of vegetation;
- d) on slopes greater than 5%;
- e) on dispersible soils; and
- f) in existing or potential discharge areas.

FAUNA MANAGEMENT

F8 During construction, pipe must be strung with gaps to allow for fauna movement across the line of the pipe.

F9 Measures must be employed to prevent fauna entrapment in pipe section or within the pipeline trench.

F10 Open trenches and pipes must be checked for fauna prior to backfill and any trapped animals removed.

PROTECTION OF RIVERINE AREAS

F11 Unless otherwise approved under relevant legislation, the holder of this authority must not

- a) excavate or place fill in a way that interferes with the flow of water in a watercourse, wetland, or spring, including; works that divert the course of flow of the water, or works that impound the water;
- b) undertake activities that take water from a watercourse, wetland or spring;
- c) undertake activities that take overland flow water using works that are mentioned as assessable development in a water resource plan under the Water Act 2000.

F12 Activities resulting in significant disturbance to the bed or banks of a watercourse or wetland, or a spring must:

- a) only be undertaken where necessary for the construction and/or maintenance of roads, tracks and pipelines that are essential for carrying out the authorised petroleum activities and no reasonable alternative location is feasible; and
- b) be no greater than the minimum area necessary for the purpose of the significant disturbance; and
- c) be designed and undertaken by an appropriately qualified person; and
- d) have rehabilitation commence immediately upon cessation of the works.

F13 Sediment control measures must be implemented to minimise any increase in water turbidity due to carrying out petroleum activities in the bed or banks of a watercourse or wetland, or a spring.

F14 Routine visual monitoring must be undertaken while carrying out petroleum activities in a watercourse, wetland or spring. If, due to the petroleum activities, water turbidity increases in the watercourse, wetland or spring outside contained areas, works must cease and the, sediment control measures must be rectified before activities recommence.

REHABILITATION REQUIREMENTS

F15 Progressive rehabilitation of disturbed areas must commence as soon as practicable following the completion of any construction or operational works associated with the authorised petroleum activities on the relevant petroleum authority.

F16 The holder of the authority must:

- a) remediate contaminated land caused by petroleum activities in accordance with the Environmental Protection Act 1994 requirements and this environmental authority; and
- b) undertake works to establish a safe, stable, non polluting landform similar to that of surrounding undisturbed areas, including where relevant excavate or place fill in a way that does not interfere with the flow of water in a watercourse, wetland, or spring, including:
 - i. backfilling any voids and trenches;
 - ii. neutralising and/or encapsulating any acid producing or potentially acid producing material;
 - iii. re-establishing surface drainage lines;
 - iv. minimising the potential for slumping, subsidence or erosion;
 - v. reinstating the top layer of the soil profile;

vi. respreading any cleared vegetation; and

vii. promoting establishment of vegetation of similar species composition and density of cover to the surrounding undisturbed land;

unless the holder of this authority has the written consent of the landowner/holder and the administering authority.

F17 As soon as practicable and within three (3) months from the date of cessation of petroleum activities that cause any significant disturbance to land, the holder of this authority must:

a) investigate contaminated land status in accordance with Environmental Protection Act 1994 requirements and the National Environment Protection (Site Assessment) Measure 1999 (NEPM) where land has been subject to contamination caused by petroleum activities authorised under this authority.

F18 All land significantly disturbed by petroleum activities must be rehabilitated to:

a) a stable landform with a self-sustaining vegetation cover with same species and density of cover to that of the surrounding undisturbed areas;

b) ensure that all land is reinstated to the pre-disturbed land use and suitability class;

c) ensure that the maintenance requirements for rehabilitated land is no greater than that required for the land prior to its disturbance by petroleum activities; and

d) ensure that the water quality of any residual void or water bodies constructed by petroleum activities meets criteria for subsequent uses and does not have potential to cause environmental harm.

F19 Maintenance of rehabilitated areas must take place to ensure and demonstrate:

a) stability of landforms;

b) erosion control measures remain effective;

c) stormwater runoff and seepage from rehabilitated areas does not negatively affect the environmental values of any waters;

d) plants show healthy growth and recruitment is occurring; and

e) rehabilitated areas are free of any declared pest plants.

F20 Rehabilitation can be considered successful when the site can be managed for its designated land-use (either similar to that of surrounding undisturbed areas or as otherwise agreed in a

written document with the landowner/holder and administering authority) without any greater management input than for other land in the area being used for a similar purpose and there is evidence that the rehabilitation has been successful for at least three (3) years.

STORAGE AND HANDLING OF CHEMICALS, FLAMMABLE AND COMBUSTIBLE LIQUIDS

- F21 All explosives, hazardous chemicals, corrosive substances, toxic substances, gases and dangerous goods must be stored and handled in accordance with the relevant Australian Standard where such is available.
- F22 Flammable and combustible liquids (including petroleum products and associated piping and infrastructure), must be stored, handled and maintained in accordance with the latest edition of Australian Standard 1940 - The Storage and Handling of Flammable and Combustible Liquids.
- F23 Any liquids stored on site that have the potential to cause environmental harm must be stored in or serviced by an effective containment system that is impervious to the materials stored and managed to prevent the release of liquids to waters or land.
- F24 Drum storages must be bunded so that the capacity and construction of the bund is sufficient to contain at least 25% of the maximum design storage volume within the bund.
- F25 All containment systems must be designed to minimise rainfall collection within the system.

Schedule G – Cultural Heritage

HERITAGE PLACES AND ARCHAEOLOGICAL ARTEFACTS

- G1 The holder of the environmental authority must take all reasonable and practicable measures to avoid impacting upon places of known or potential cultural heritage significance whilst carrying out petroleum activities.

Schedule H – Nature Conservation

ENVIRONMENTALLY SENSITIVE AREAS

- H1 The holder of the environmental authority must not
- a) conduct petroleum activities within a Category A or Category B environmentally sensitive area;
 - b) cause any significant disturbance to land within 1 km of a Category A environmentally sensitive area or within 500m of a Category B environmentally sensitive area; or
 - c) conduct petroleum activities in a Category C environmentally sensitive area unless there is a written agreement to enter the area for those activities from the relevant administering authority.
- H2 If the relevant administering authority imposes any conditions on undertaking petroleum activities within a Category C environmentally sensitive area, the holder must comply with those conditions.

Schedule I – Nature Conservation

- I1 If the petroleum authority is in or partly within a declared wild river area, or a moratorium is in place under the Wild Rivers Act 2005, the holder of this authority must ensure that petroleum activities within the (proposed) wild river area are conducted in accordance with the conditions in the wild river declaration for the area that state they are for petroleum activities.

Schedule J – PPL22 – Gas Pipeline

J1 PETROLEUM INFRASTRUCTURE

All petroleum infrastructure (including buildings, structures, plant and equipment erected and/or used for the petroleum activities) authorised under this authority must be located within the PPL22 licence areas as shown in Appendix 2 and defined by the coordinates in Schedule J, Table 1.

Schedule J Table 1 - Location of the PPL22 pipeline corridor

Location	WOW	Latitude
Start	E 148° 54' 29"	S 27' 59"
Finish	E 149° 03' 24"	S 27" 45"

- J2 The gas pipeline authorised under this authority is constructed in accordance with the design specifications and operating parameters as described in Schedule J, Table 2.

Schedule J Table 2 - Pipeline Design Specifications and Operation Parameters for PPL22

Pipeline Component	PPL22
Length	15 km
Diameter (Outside)	114.3 mm
Material	Steel
Depth Cover	Built to Australian Standard AS 2885 (min cover is 800mm) (Rating - Broad Rural R1)
Annual Capacity	Limited to production from gas field (including both condensate and gas) which is an average of 68,320 tonnes per year.
Maximum Allowable Operating Pressure	14.9MPa @ 60°C
Coating	Built to Australian Standard AS 2885
Right of Way	8 m wide easement

Note: PPL22 is a pipeline used to transport Gas.

- J3 Prior to the commencement of decommissioning or abandonment activities the scope of work for decommissioning or abandonment of project infrastructure shall be developed and agreed to by the administering authority.
- J4 All petroleum infrastructures must be removed from the relevant petroleum authority prior to surrender of this authority, except where agreed in writing by the administering authority and the current landowner.

EMERGENCY RESPONSE PLANS FOR DEALING WITH PIPELINE INCIDENTS THAT MAY RESULT IN ENVIRONMENTAL HARM

- J5 The holder of this authority must develop and implement an Emergency Response Plan within three (3) months from the date of grant of this authority and submit to the Administering Authority a copy of the original or subsequently amended Emergency Response Plan for the operating of the pipelines and associated facilities to aid in the effective response to an emergency situation that may result in environmental harm. The plan shall include:
- a) means by which an emergency response is initiated;
 - b) defined key roles and responsibilities required to respond to an emergency;
 - c) facilities required to coordinate the emergency response;

- d) key contact list;
- e) criteria for escalation of an emergency
- f) likely emergency scenarios and guidelines for responding to such scenarios;
- g) communication and documentation requirements; and
- h) evacuation protocols and muster points.

- J6 The Emergency Response Plan shall be reviewed annually to validate the adequacy of the scope of emergency scenarios and adequacy of the content
- J7 In accordance with Condition (J6), the holder of this authority must ensure that relevant personnel shall be trained and competent to effectively fulfill their roles required as detailed in the Emergency Response Plan to deal with pipeline incidents that could potentially result in environmental harm. Training records are to be kept for five (5) years.
- J8 The holder of this authority must undertake emergency exercises to:
- a) test the effectiveness of the emergency response plan;
 - b) validate the competency of key emergency response personnel;
 - c) assess capability to respond to an emergency;
 - d) reinforce prior training; and
 - e) identify opportunities for improvement.

Emergency response exercises may be in the form of simulated emergencies, practical drills, desktop exercises, resources and equipment checks, or other exercises designed to systematically include all personnel likely to be involved.

Schedule K – Monitoring Programs

MONITORING PROGRAMS

- K1 The holder of this authority must:
- a) develop and implement from the date of grant of this authority, a monitoring program that Will demonstrate compliance with the conditions in this authority; and

b) document the monitoring and inspections carried out under the program and any actions taken.

- K2 The holder of this authority must ensure that a suitably qualified, experienced and competent person(s) conduct all monitoring required by this authority.
- K3 Record, compile and keep for a minimum of five (5) years all monitoring results required by this authority and make available for inspection all or any of these records upon request by the administering authority. Monitoring results relating to rehabilitation should be kept until the relevant petroleum tenure is surrendered.
- K4 Any management or monitoring plans, systems or programs required to be developed and implemented by a condition of this authority must be reviewed for performance and amended if required on an annual basis.

Schedule L – Community Issues

MANAGING COMPLAINTS

- L1 When the administering authority advises the holder of a complaint alleging nuisance (e.g. caused by dust or noise), investigate the complaint and advise the administering authority of the action proposed or undertaken in relation to the complaint.
- L2 If the administering authority is not satisfied with the proposed or completed action, undertake monitoring or other action requested by the administering authority.
- L3 When requested by the administering authority, the authority holder must undertake relevant specified monitoring within a reasonable and practicable timeframe nominated by the administering authority to investigate any complaint of environmental harm at any sensitive or commercial place. The results of the investigation (including an analysis and interpretation of the monitoring results) and abatement measures implemented must be provided to the administering authority within 14 days of completion of the investigation, or receipt of monitoring results, whichever is the latter.

- L4 Maintain a record of complaints and incidents causing environmental harm, and actions taken in response to the complaint or incident; and
- L5 Retain the record of complaints required by this condition for five (5) years.

COMPLAINT RESPONSE

- L6 The holder of this authority must record the following details for all complaints received and provide this information to the administering authority on request
 - a) time, date, name and contact details of the complainant;
 - b) reasons for the complaint;
 - c) any investigations undertaken;
 - d) conclusions formed; and
 - e) any actions taken

Schedule M – Notification Procedures

NOTIFICATION OF EMERGENCIES AND INCIDENTS

- M1 The holder of this authority must:
 - a) telephone the Department of Environment and Resource Management's Pollution Hotline (1300 130 372) and the landholder or their nominated representative as soon as practicable, but within 24 hours, after becoming aware of any release of contaminants not in accordance with the conditions of this authority or any event where environmental harm has been caused or may be threatened; and
 - b) notify the administering authority in writing within 14 days of the initial notification.
- M2 Subject to condition (M1), the holder of this authority is required to report in the case of. uncontained spills (including hydrocarbon, associated water or a mixtures of both) of the following volumes or kind:
 - a) releases of any volume to water; and
 - b) releases of volume greater than 200L to land; and

c) releases of any volumes where potential serious or material environmental harm is considered to exist.

M3 The notification of emergencies or incidents as required by conditions number (M1 and M2) must include but not be limited to the following:

- a) the authority number and name of holder;
- b) the name and telephone number of the designated contact person;
- c) the location of the emergency or incident;
- d) the date and time of the release;
- e) the time the holder of the authority became aware of the emergency or incident;
- f) the estimated quantity and type of any substances involved in the incident;
- g) the actual or potential suspected cause of the release;
- h) a description of the effects of the incident including the environmental harm caused, threatened, or suspected to be caused by the release;
- i) any sampling conducted or proposed, relevant to the emergency or incident; and
- j) actions taken to prevent any further release and mitigate any environmental harm caused by the release.

M4 Within 14 days following the initial notification of an emergency or incident or receipt of monitoring results, whichever is the later, further written advice must be provided to the administering authority, including the following:

- a) results and interpretation of any samples taken and analysed;
- b) outcomes of actions taken at the time to prevent or minimise environmental harm; and
- c) proposed actions to prevent a recurrence of the emergency or incident.

M5 As soon as practicable, but not more than six (6) weeks following the conduct of any environmental monitoring performed in relation to the emergency or incident, which results in the release of contaminants not in accordance, or reasonably expected to be not in accordance with the conditions of this authority, written advice must be provided of the results of any such monitoring performed to the administering authority.

Definition

Definitions

Note: Where a term is not defined in this Authority, the definition in the Environmental Protection Act

1994, its regulations and Environmental Protection Policies or the Petroleum and Gas (Production and Safety) Act 2004 and its regulations must be used in that order.

Accepted engineering standards, in relation to dams, means those standards of design, construction, operation and maintenance that are broadly accepted within the profession of engineering as being good practice for the purpose and application being considered. In the case of dams, the most relevant documents would be publications of the Australian National Committee on Large Dams (ANCOLD), guidelines published by Queensland government departments and relevant Australian and New Zealand Standards.

Administering authority means:

- a) for a matter, the administration and enforcement of which has been devolved to a local government under section 514 of the Environmental Protection Act 1994 — the local government or
- b) for all other matters — the Chief Executive of the Department of Environment and Resource Management; or
- c) another State Government Department, Authority, Storage Operator, Board or Trust, whose role is to administer provisions under other enacted legislation.

Appropriately qualified person means a person who has professional qualifications, training, skills or experience relevant to the nominated subject matter and can give authoritative assessment, advice and analysis to performance relative to the subject matter using the relevant protocols, standards, methods or literature.

Archaeological artefact means:

- a) any artefact that is evidence of an aspect of Queensland's history, whether it is located in, on or below the surface of land, and not
- b) a thing that is Aboriginal cultural heritage under the Aboriginal Cultural Heritage Act 2003 or Torres Strait Islander cultural heritage under the Torres Strait Islander Cultural Heritage Act 2003.

Archaeological investigation means a physical investigation of the place carried out by a person or persons with recognised qualifications, experience or standing in historical archaeology, mining history, cultural heritage management, or related discipline for the purpose of investigating, recording or conserving archaeological artefacts on the place.

Archaeological place means a place entered in the Queensland heritage register under Part 5 of the Queensland Heritage Act 1992.

Assessed or assess by a suitably qualified and experienced person in relation to a hazard assessment of a dam means that a statutory declaration has been made by that person and, when taken together with any attached or appended documents referenced in that declaration, all of the following aspects are addressed and are sufficient to allow an independent audit at any time:

- a) what has been assessed and the precise nature of that assessment;
- b) the relevant legislative, regulatory and technical criteria on which the assessment has been based;
- c) the relevant data and facts on which the assessment has been based, the source of that material, and the efforts made to obtain all relevant data and facts; and
- d) the reasoning on which the assessment has been based using the relevant data and facts, and the relevant criteria.

Associated water means underground water taken or interfered with, if the taking or interference happens during the course of, or results from, the carrying out of another activity authorised under a petroleum authority, such as producing petroleum from a well, and includes water also known as produced formation water. The term includes all contaminants suspended or dissolved in the water.

Associated works in relation to a dam means:

- a) operations of any kind and all things constructed, erected or installed for that dam; and
- b) any land used for those operations.

Background noise level means the sound pressure level, measured in the absence of the noise under investigation, as the LA90, T being the A-weighted sound pressure level exceeded for 90 percent of the measurement time period T of not less than 15 minutes, using Fast response.

Bed and banks for a watercourse or wetland means land over which the water of the watercourse or wetland normally flows or that is normally covered by the water, whether permanently or intermittently; but does not include land adjoining or adjacent to the bed or banks that is from time to time covered by floodwater.

Beneficial use means:

1. with respect to dams, that the current or proposed owner of the land on which a dam stands, has found a use for that dam that is:
 - a) of benefit to that owner in that it adds real value to their business or to the general community,
 - b) in accordance with relevant provisions of the Environmental Protection Act 1994,
 - c) sustainable by virtue of written undertakings given by that owner to maintain that dam, and
 - d) the transfer and use have been approved or authorised under any relevant legislation; or
2. with respect to associated water, see Environmental Protection Agency's Operational Policy Management of water produced in association with petroleum activities (associated water) and Notice of decision to approve a resource for beneficial use - associated water which can be accessed on Department of Environment and Resource Management's website at www.derm.qld.gov.au.

Bund or bunded in relation to spill containment systems for fabricated or manufactured tanks or containers designed to a recognised standard means an embankment or wall of brick, stone, concrete or other impervious material which may form part or all of the perimeter of a compound and provides a barrier to retain liquid. Since the bund is the main part of a spill containment system, the whole system (or bunded area) is sometimes colloquially referred to within industry as the bund. The bund is designed to contain spillages and leaks from liquids used, stored or processed above ground and to facilitate clean-up operations. As well as being used to prevent pollution of the receiving environment, bunds are also used for fire protection, product recovery and process isolation.

Certification or certified by a suitably qualified and experienced person in relation to a design plan or an annual report regarding dams, means that a statutory declaration has been made by that person and, when taken together with any attached or appended documents referenced in that declaration, all of the following aspects are addressed and are sufficient to allow an independent audit at any time:

- a) exactly what is being certified and the precise nature of that certification;
- b) the relevant legislative, regulatory and technical criteria on which the certification has been based;
- c) the relevant data and facts on which the certification has been based, the source of that material, and the efforts made to obtain all relevant data and facts; and
- d) the reasoning on which the certification has been based using the relevant data and facts, and the relevant criteria.

Clearing means:

a) in relation to grass, scrub or bush - the removal of vegetation by disturbing root systems and exposing underlying soil (including burning), but does not include-

- i. the flattening or compaction of vegetation by vehicles if the vegetation remains living; or
- ii. the slashing or mowing of vegetation to facilitate access tracks; or.
- iii. the clearing of noxious or introduced plant species; and

b) in relation to trees - cutting down, ringbarking, pushing over, poisoning or destroying in any way.

Commercial place means a work place used as an office or for business or commercial purposes which is not part of the petroleum activities and does not include employees accommodation or public roads.

Construction in relation to a dam includes building a new dam and modifying or lifting an existing dam.

Cultural heritage significance means aesthetic, architectural, historical, scientific, social or other significance, to the present generation or past or future generations, as assessed against the following criteria:

a) the place is important in demonstrating the evolution or pattern of Queensland's history;

b) the place demonstrates rare, uncommon or endangered aspects of Queensland's cultural heritage;

c) the place has potential to yield information that will contribute to an understanding of Queensland's history;

d) the place is important in demonstrating the principal characteristics of a particular class of cultural places;

e) the place is important because of its aesthetic significance;

f) the place is important in demonstrating a high degree of creative or technical achievement at a particular period;

g) the place has a strong or special association with a particular community or cultural group for social, cultural or spiritual reasons;

h) the place has a special association with the life or work of a particular person, group or organisation of importance in Queensland's history.

Dam means a land-based structure (including a levee, dyke or bund) or a void that is intended or used to contain, divert or control flowable substances, and includes any substances that are thereby contained or controlled by that land-based structure or void and associated works. However; a dam does not mean a fabricated or manufactured tank or container designed to a recognised standard, nor does a dam mean a land-based structure where that structure is designed to an Australian Standard such as a bund designed for spill containment to AS1940.

Declared pest plants are listed in Schedule 2 of the Land Protection (Pest and Stock Route Management) Regulation 2003.

Design plan is the documentation required to describe the physical dimensions of the dam, the materials and standards to be used for construction of the dam, and the criteria to be used for operating the dam. The documents must include design and investigation reports, specifications and certifications, together with the planned decommissioning and rehabilitation works and outcomes. A design plan may include 'as constructed' drawings.

Discharge area is an area in the landscape where the net movement of groundwater is out of the aquifer. This may be expressed by waterlogging where groundwater discharges at the soil surface because of seepage or salting because of evaporation.

Dispersible soils are structurally unstable soils that readily breakdown into their constituent particles in water (e.g. the clay material disintegrates into particles less than 2 microns across within 24 hours when soil crumbs are submerged in distilled water). These soils are also known as sodic soils and have a high percentage of sodium ions (in soluble or exchangeable form).

Ecosystem functioning means the interactions between and within living and non-living components of an ecosystem and generally correlates with the size, shape and location of an area of vegetation.

End means the stopping of the particular activity that has caused a significant disturbance in a particular area. It refers to, among other things, the end of a seismic survey or the end of a drilling operation. It does not refer to the end of all related activities such as rehabilitation. In other words, it does not refer to the 'completion' of the petroleum activity, the time at which the petroleum authority ends or the time that the land in question ceases to be part of an authority.

Equivalent person means an equivalent person as defined in Item 63 of Schedule 2 in the Environmental Protection Regulation 2008.

Evaporation pond means a dam specifically designed for the purpose of disposing of a liquid via evaporation.

Fill means any kind of material in solid form (whether or not naturally occurring) capable of being deposited at a place but does not include material that forms a part of, or is associated with, a structure constructed in a watercourse, wetland or spring including a bridge, road, causeway, pipeline, rock revetment, drain outlet works, erosion prevention structure or fence.

Financial assurance means a security deposit, either cash or a bank guarantee, held by the administering authority to cover the potential costs of preventing or minimising environmental harm from, or rehabilitating areas significantly disturbed by, the petroleum activities.

Flowable substance means matter or a mixture of materials which can flow under conditions potentially affecting that substance. Constituents of a flowable substance can include water, other fluids or solids, or a mixture that includes water and any other fluids or solids either in solution or suspension.

Foreseeable future is the period used for assessing the total probability of an event occurring. Permanent structures and ecological sustainability should be expected to still exist at the end of a 150 year foreseeable future with an acceptably low probability of failure before that time.

Hazard in relation to a dam as defined means the potential for environmental harm resulting from the collapse or failure of the dam to perform its primary purpose of containing, diverting or controlling flowable substances.

Hazard category means the level of hazard (low, significant or high) assigned to a dam as a result of an assessment against tables and other criteria in the Manual for Assessing Hazard Categories and Hydraulic Performance of Dams (Version 1.0, 2008) published by the Environmental Protection Agency (Department of Environment and Resource Management) on its website.

Heritage, place means any place that may be of cultural heritage significance, or any place with potential to contain archaeological artefacts that are an important source of information about Queensland's history.

High bank means the defining terrace or bank or, if no bank is present, the point on the active floodplain, which confines the average annual peak flows in a watercourse.

Highly erodible soils means very unstable soils that are generally described as Sodosols with hard-setting, fine sandy loam to silty clay loam surfaces (solodics, solodised solonetz and solonetz) or soils with a dispersible layer located less than 25cm deep or soils less than 25cm deep.

Hydraulic performance means the capacity of a regulated darn to contain or safely pass flowable substances based on a probability (AEP) of performance failure specified for the relevant hazard category in the Manual for Assessing Hazard Categories and Hydraulic Performance of Dams (Version 1.0, 2008) published by the Department of Environment and Resource Management on its website.

Infrastructure means water storage dams, roads and tracks, equipment, buildings and other structures built for the purpose and duration of the conduct of the petroleum activities, but does not include other facilities required for the long term management of the impact of those activities or the protection of potential resources. Such other facilities include dams other than water storage dams (e.g. evaporation ponds), pipelines and

assets that have been decommissioned, rehabilitated and lawfully recognised as being subject to subsequent transfer with ownership of the land.

LA90, adj, 15 mins means the A-weighted sound pressure level exceeded for 90 percent of the measurement time period of 15 minutes, adjusted for noise characteristics including tonality and impulsiveness and measured in the presence of the noise under investigation, using Fast Response.

LA10, adj 15 mins means the A-weighted sound pressure level exceeded for 10 percent of the measurement time period of 15 minutes, adjusted for noise character including tonality and impulsiveness and measured in the presence of the noise under investigation, using Fast Response.

LA1, adj 15 mins means the A-weighted sound pressure level exceeded for 1 percent of the measurement time period of 15 minutes, adjusted for noise character including tonality and impulsiveness and measured in the presence of the noise under investigation, using Fast Response.

Leachate means a liquid that contains soluble, suspended or miscible contaminants likely to have been derived from material which is stored, processed or disposed of on site and which the liquid has passed through or emerged from, or is likely to have passed through or emerged from.

Levee means a dyke or bund that is designed only to provide for the containment and diversion of stormwater or flood flows from a contributing catchment; or containment and diversion of flowable materials resulting from unplanned releases from other works of infrastructure, during the progress of those stormwater or flood flows or those unplanned releases; and does not store any significant volume of water or flowable substances at any other times.

Limited regulated waste means any of the following regulated wastes, asbestos, clinical waste or quarantine waste that has been rendered non-infectious, fish processing waste, food processing waste, poultry processing waste, tyres or treatment tank sludge or residue produced in the carrying out of an activity in relation to sewage treatment and water supply activities.

Noxious means harmful or injurious to health Or physical well being.

`Of concern' regional ecosystem means an 'of concern' regional ecosystem identified in the database maintained by the Department of Environment and Resource Management called 'Regional ecosystem description database' containing regional ecosystem numbers and descriptions. The database is available for inspection on the Department of Environment and Resource Managements website at www.derm.qld.gov.au/nature-conservation/biodiversity/regional-ecosystems/.

Offensive means causing unreasonable offence or displeasure; is disagreeable to the sense; disgusting, nauseous or repulsive, other than trivial harm.

Overland flow water means water, including floodwater, flowing over land, otherwise than in a watercourse or lake:

- a) after having fallen as rain or in any other way; or
- b) after rising to the surface naturally from underground.

Permanent infrastructure includes any infrastructure (roads, tracks, bridges, culverts, dams, bores, buildings, fixed machinery, hardstand areas, airstrips, helipads, pipelines etc) which is to be left by agreement with the landowner.

Petroleum authority is:

- a) a 1923 Act petroleum tenure granted under the Petroleum Act 1923; or
- b) a petroleum authority granted under the Petroleum and Gas (Production and Safety) Act 2004; or
- c) a licence, permit, pipeline licence, primary licence, secondary licence or special prospecting authority granted under the Petroleum (Submerged Lands) Act 1982.

Regulated dam means any dam in the significant or high hazard category as assessed using the Manual for Assessing Hazard Categories and Hydraulic Performance of Dams (Version 1.0, 2008) published by the Department of Environment and Resource Management on its website.

Regulated waste means non-domestic waste mentioned in Schedule 7 of the Environmental Protection Regulation 2008 (whether or not it has been treated or immobilised), and includes-

- a) for an element - any chemical compound containing the element; and
- b) anything that has contained the waste.

Release of a contaminant into the environment includes:

- a) to deposit, discharge, emit or disturb the contaminant; and
- b) to cause or allow the contaminant to be deposited, discharged, emitted or disturbed; and
- c) to allow the contaminant to escape; and
- d) to fail to prevent the contaminant from escaping.

Sensitive place means:

- a) a dwelling (including residential allotment, mobile home or caravan park, residential marina or other residential premises, motel, hotel or hostel;
- b) a library, childcare centre, kindergarten, school, university or other educational institution;

- c) a medical centre, surgery or hospital;
- d) a protected area;
- e) a public park or garden that is open to the public (whether or not on payment of money) for use other than for sport or organised entertainment.

Significantly disturbed land or significant disturbance to land means land that is:

- a) contaminated land; or
- b) disturbed and human intervention is needed to rehabilitate it
 - i. to a state required under this authority; or
 - ii. if the authority does not require the land to be rehabilitated to a particular state - to its state immediately before the disturbance.

Examples of a significant disturbance to land:

- a) areas where soil has been compacted, removed, covered, exposed or stockpiled;
- b) areas where vegetation has been removed or destroyed to an extent where the land has been made susceptible to erosion;
- c) areas where land use suitability or capability has been diminished;
- d) areas within a watercourse, wetland, or spring where petroleum activities have occurred causing the loss of habitat or a decline in ecological processes and requiring human intervention to restore or stabilise the disturbed area and/or protect the quality of the water downstream of the disturbance;
- e) areas submerged by waste or water;
- f) areas under temporary infrastructure. Temporary infrastructure includes any infrastructure (roads, tracks, bridges, culverts, dams, bores, buildings, fixed machinery, hardstand areas, airstrips, helipads etc) which is to be removed after petroleum activities have ceased; or
- g) areas where land has become contaminated land and a suitability statement has not been issued.

However, for the purpose of this authority the following areas are not significantly disturbed:

- a) areas off the petroleum authority (e.g. roads or tracks which provide access to the petroleum authority);
- b) areas previously significantly disturbed which have been rehabilitated to the administering authority's satisfaction;

c) areas under permanent infrastructure (e.g. roads, bridges, buildings) as agreed by the administering authority and landholder;

d) areas that were significantly disturbed prior to the grant of the petroleum authority, unless those areas are re-disturbed by the petroleum authority holder during the course of carrying out the petroleum activities or were conducted on a petroleum authority that was replaced by the current authority (e.g. through conditional surrender or the transition from an authority to prospect to a petroleum lease).

Site means the area within the petroleum authority or authorities to which the environmental authority relates.

Spring means the land to which water rises naturally from below the ground and the land over which the water then flows.

Stable in relation to land means landform dimensions are or will be stable within tolerable limits now and in the foreseeable future. Stability includes consideration of geotechnical stability, settlement and consolidation allowances, bearing capacity (trafficability), erosion resistance and geochemical stability with respect to seepage, leachate and related contaminant generation.

State heritage place means a place entered in the Queensland heritage register under Part 4 of the Queensland Heritage Act 1992.

Suitably qualified and experienced person in relation to dams means one who is a Registered Professional Engineer of Queensland (RPEQ) under the provisions of the Professional Engineers Act 1988, OR registered as a National Professional Engineer (NPER) with the Institution of Engineers Australia, OR holds equivalent professional qualifications to the satisfaction of the administering authority for the Act; AND the administering authority for the Act is satisfied that person has knowledge, suitable experience and demonstrated expertise in relevant fields, as set out below:

- a) knowledge of engineering principles related to the structures, geomechanics, hydrology, hydraulics, chemistry and environmental impact of dams; and
- b) a total of five (5) years of suitable experience and demonstrated expertise in the geomechanics of dams with particular emphasis on stability, geology and geochemistry; and
- c) a total of five (5) years of suitable experience and demonstrated expertise each, in three (3) of the following categories:
 - i. investigation and design of dams;
 - ii. construction, operation and maintenance of dams;
 - iii. hydrology with particular reference to flooding, estimation of extreme storms, water management or meteorology;
 - iv. hydraulics with particular reference to sediment transport and deposition, erosion control, beach processes;
 - v. hydrogeology with particular reference to seepage, groundwater;
 - vi. solute transport processes and monitoring thereof;
 - vii. dam safety.

"Suitably qualified and experienced person" - means a person:

- a) holding a National Association of Testing Authorities (NATA) signatory; or
- b) either;
 - i. who is holder of a degree in Science or Applied Science conferred after due examination by a University or College of Advanced Education in Queensland; or
 - ii. who is the holder of a degree in Science or Applied Science conferred after due examination by a University, College of Advanced Education or other Tertiary Education Institution outside Queensland and that is to be the like effect as a degree conferred by a University or College of Advanced Education in Queensland; or
 - iii. who has corporate membership of the Royal Australian Chemical Institute; and

- iv. has gained at least three (3) years practical experience in chemical bacteriological or other specialist analysis to demonstrate the persons capacity to maintain a high level of performance in all aspects of the performance of the particular analysis; or
- c) working under the direct supervision of person(s) mentioned in a) and b).

Thing means a material object without life or consciousness or some entity, object or creature which is not or cannot be specifically designated or precisely described.

Threatening processes are processes, features and actions that can have a detrimental effect upon the health and viability of an area of vegetation. For example, altered hydrology, land use practices, invasion by pest and weed species, land degradation, edge effects and fragmentation.

Tolerable limits means a range of parameters regarded as being sufficient to meet the objective of protecting relevant environmental values. For example, a range of settlement for a tailings capping, rather than a single value, could still meet the objective of draining the cap quickly, preventing pondage and limiting infiltration and percolation.

Topsoil means the surface (top) layer of a soil profile which is more fertile, darker in colour, better structured and supports greater biological activity than underlying layers. The surface layer may vary in depth depending on soil forming factors, including parent material, location and slope, but generally is not greater than about 300mm in depth from the natural surface.

Trench water means water (usually shallow groundwater) in the pipeline trench.

Void means any man-made, open excavation in the ground (includes borrow pits, drill sumps, frac pits, flare pits, cavitation pits and trenches).

Waters includes all or any part of a creek, river, stream, lake, lagoon, pond, swamp, wetland, spring, unconfined surface water, unconfined water in natural or artificial watercourses, bed and bank of any waters, dams, non-tidal or tidal waters (including the sea), stormwater channel, stormwater drain, roadside gutter, stormwater run-off, and underground water.

Watercourse is a creek, river or stream

a) in which water flows intermittently or permanently in a visibly defined channel, whether artificial, artificially improved or natural; and

b) that has evidence of biological dependence on any water that flows in the creek, river or stream or on the banks or bed.

Wetland means an area shown as a wetland on a 'Map of referable wetlands', a document approved by the chief executive (environment). A map of referable wetlands can be viewed www.derm.qld.gov.au

Wild river declaration is a statutory instrument under the Wild Rivers Act 2005. A declaration lists the relevant natural values to be preserved and delineates certain parts of the wild river area and the different constraints that may apply in these areas. With reference to environmental authorities for petroleum, each declaration also specifies conditions to be included in a new authority if the activity is to be located within the wild river area.
