Dear Ms Horton

TEP MAN19660/19760 – May Noise Monitoring Results & TEP Cancellation

Following receipt of the decision to cancel a transitional environmental program on 28 April 2018, please find below the final monitoring results for the month of May, as required by Reporting Requirement 2 of TEP MAN19660.

Noise monitoring was completed for a period of 1 week, between 2 and 9 May 2018. A calibrated 01dB Cube Sound Analyser was deployed in the agreed representative location in the road reserve adjacent to the Nothdurft residence (refer Figure 1 attached). Noise measurements were recorded at 15-minute intervals and included audio files to allow for post measurement analysis and identification of noise sources and noise source contribution. The equipment setup and analysis methodology was identical to EPO STAT1085 and ASK Consulting's EPO Audit report (8894R03V01) can be referred to for any additional details, including calibration certificates.

ASK Consulting have completed their audit of the noise monitoring data which confirms that noise from the Kenya CPP was fully compliant with condition E7 for the May 2018 monitoring period. Noise levels from the Kenya CPP ranged from inaudible up to 26dB(A), which indicates that the noise barrier located at the Kenya CPP is effectively reducing noise emissions at the Nothdurft residence.

QGC has now complied with TEP requirements in full, having maintained compliance with 28dB(A) night time noise limit at the Nothdurft residence for all monitoring campaigns.

Should you have any questions or wish to discuss, please do not hesitate to contact me on 07 3024 8043.

Yours sincerely

Sam Heritage
QGC Lead Compliance Advisor
